

CO PILOT

Electric assist option.

The CO-PILOT is the best way to introduce someone to life on two wheels. It's uniqueness lies in the way the pilot sits on the front rather than the back of the tandem. It is a fantastic tool for teaching people to cycle.

The Pilot on the rear has control of the brakes and the gears and can share control of the steering. This can be easily fixed if necessary so that the co-pilot has no input into the steering.

It is also a great bike for visually impaired people who can now ride out front with the wind in their hair!

Technical Data

- Length 242cm
- Width 40 cm
